

K. J. Somaiya College of Engineering, Mumbai-77

Batch: A-4

Roll No.: 16010122151

Experiment / Assignment / Tutorial No: 6

TITLE : Design interface of LY Project using steps of design process

AIM : To design LY Project's Interface.

Expected OUTCOME of Experiment:

CO 3: Apply the concepts of Design thinking for development of product/ service

Books/ Journals/ Websites referred:

1 "Design Thinking", Gavin Ambrose Design Paul Harris

Theory:

- The design process engages a high degree of creativity but in a way that is controlled and directed by the process so that it is channeled towards producing a viable, practical solution to the design problem, meeting or excelling the stated aims of the brief.
- While creativity in design is important, design is an activity that serves economic as well as creative goals.
- Within the design process, seven steps can be identified:
 - Define
 - Research
 - Ideate
 - Prototype
 - Select
 - Implement
 - And learn
- First, the design problem and the target audience needs to be defined.
- The research stage reviews information such as the history of the design problem, end-user research and opinion-led interviews, and identifies potential obstacles.
- Ideate is the stage where end-user motivations and needs are identified and ideas are generated to meet these, perhaps through brainstorming.
- Prototyping sees the resolve or working-up of these ideas, which are presented for user-group and stakeholder review, prior to being presented to the client.
- Selection sees the proposed solutions reviewed against the design brief objective. Some solutions might be practical but may not be the best ones.
- Implementation sees design development and its final delivery to the client.

K. J. Somaiya College of Engineering, Mumbai-77

- **Learning helps designers improve their performance and, for this reason, designers should seek client and target audience feedback and determine if the solution met the goals of the brief.**

Introduction to LY Project:

ScholarBridge is a web platform that connects **students in need of scholarships** with **trusts/NGOs providing funds**, managed by a **SuperAdmin**.

- **Students:** Register with verified student email, upload KYC docs (Aadhaar), fill in educational, family, and financial details, apply once per year, and track funding status.
- **Trusts/NGOs:** After admin approval, can view applications, approve/reject requests, and manage fund disbursement history.
- **SuperAdmin:** Manages students and trusts, resolves disputes, blacklists fraud accounts, and provides analytics.

The challenge: **design an intuitive, secure, and scalable user interface** for all stakeholders.

Implementation:

Details about all steps of Design Process.

1. Define

- **Problem:** Students face difficulty finding and tracking scholarships; Trusts need verified applicants; Admin must ensure transparency.
- **Target users:** Students, Trusts/NGOs, SuperAdmin.
- **Goals:** Simple registration, secure KYC, transparent application tracking, easy approval/rejection, analytics dashboards.

2. Research

- Studied similar platforms (e.g., NSP Portal, private scholarship sites).
- Identified pain points: lengthy forms, lack of real-time status, unclear trust verification.
- Collected feedback from potential student users → need for **mobile-friendly, simple dashboards**.

3. Ideate

- Brainstormed layouts:
 - Student Dashboard: Profile, Apply Form, Application Status, Receipts.
 - Trust Dashboard: Pending Applications, History, Analytics.

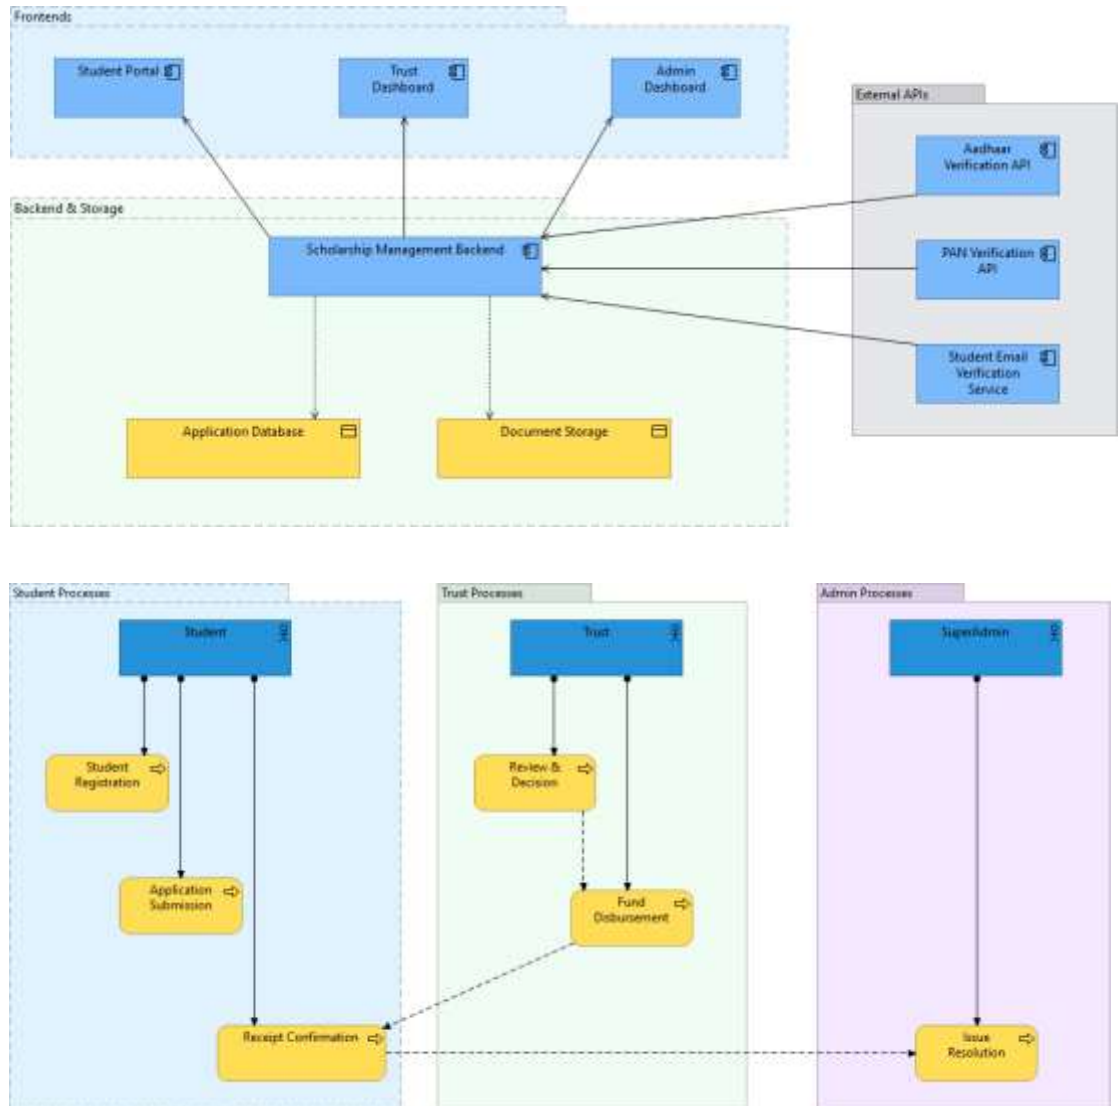

K. J. Somaiya College of Engineering, Mumbai-77

- Admin Dashboard: Trust verification, Student/Trust blacklist, Dispute resolution, Reports.

4. Prototype

- Low-fidelity wireframes in Figma (login/signup, student application form, dashboards).
- Navigation flow: **Login** → **Role-based Dashboard** → **Actions (Apply/Approve/Manage)**.
- Integrated OTP verification and document upload interface.

5. Select

- Chose **Client-Server** Architecture.
- Chose **responsive card-based UI** with TailwindCSS for clarity.
- Chose **role-based dashboards** to keep workflows separate and secure.

K. J. Somaiya College of Engineering, Mumbai-77

- Simple **stepper-based application form** for students (personal → education → family → bank → upload).

6. Implement

- Tools: React.js (frontend), Express.js (backend), TailwindCSS (UI), PostgreSQL (DB).
- Authentication: JWT + OTP for email verification.
- Secure upload (Cloudinary/S3) for documents.
- Dark/light mode for accessibility.

7. Learn

- Continuous feedback from test users (students, NGO volunteers).
- Metrics: completion rate of applications, average approval time, dispute resolution rate.
- Iterative improvements: simplifying forms, better mobile optimization, adding chatbot support.

Our platform brings together students, trusts, and educational institutions to create a seamless scholarship ecosystem.

For Students

Access thousands of scholarship opportunities tailored to your profile and academic achievements.

For Trusts & NGOs

Connect with deserving students and manage your scholarship programs efficiently.

Secure & Verified

All users are verified with KYC documents ensuring authentic and trustworthy connections.

Smart Matching

AI-powered algorithms match students with relevant opportunities based on their profiles.

About ScholarBridge

Founded with a vision to democratize access to quality education, ScholarBridge serves as a bridge between deserving students and generous trusts. We believe that financial constraints should never be a barrier to academic excellence.

- Transparency First**
Every transaction and process is transparent, ensuring trust between all parties.
- Verified Community**
All users undergo thorough verification to maintain platform integrity.
- Impact Driven**
Every scholarship distributed creates a lasting impact on a student's future.

Stories of Success

Hear from students and trusts who have found success through our platform

"ScholarBridge helped me find the perfect scholarship for my engineering studies. The process was smooth and transparent."

Priya Sharma
Engineering Student

"We've been able to reach genuine students who truly need financial support. The platform makes scholarship management effortless."

Ramesh Foundation
Educational Trust

"Thanks to ScholarBridge, I'm pursuing my dream of becoming a doctor. The financial support came at the perfect time."

Amit Kumar
Medical Student

Post Lab Descriptive Questions

1 Specify the role of design thinking principles.

Design thinking guarantees that ScholarBridge is developed with users at its core rather than being solely driven by technology. It highlights:

- **Empathy** → deeply grasping the challenges faced by students and NGOs.
- **Ideation & Prototyping** → exploring diverse solutions and validating them through early testing.
- **Iteration** → continuously enhancing UI/UX through user feedback.

This approach leads to a solution that is **usable**, **accessible**, and truly **impactful** for every stakeholder involved.
